

BIOFACH Congress 2019

Future organic products

VA and the organic focus

- Own factory producing organic forage for pigs
 - Focus on feed products, guidance, forage
 - Developing organic products since 1995
 - Cooperation with Seges, the farmers, universities, slaughter houses, etc.
- 

Challenges due to organic production

- Self-sufficiency of protein in Denmark
- Secure right balance in essential amino acids
- Maintain focus on sustainability
- Traceability and local production

Future organic products

- 
- The background image shows a close-up of starfish and two piles of powder. One pile is a light tan color, and the other is a darker, more yellowish-brown color. The starfish are brown and appear to be dried or processed.
- Starfish meal from our own factory
 - Grass protein in development
 - Focus on 100% locally "grown" protein
 - Win-win cooperation with the danish mussel fishermen

Experiences

Starfish:

- Protein and fat source: 48/10 – applied for piglets, sows and biodynamic hens – layers
- Fed in 12 months in DK. Good appetite and a healthy alternative to organic soy products

Grass protein:

- Feed test in Aarhus University 1218 – 0319 (Seges and VA):
Pigs in growth 12-110 kg. Replacing organic soy 0-5-10-15 %
- Best performance due to growth and feed efficiency

Our goals

- Supply of local and sustainable organic protein in the EU
- Practical innovation – local cooperation
- Focus on the consumer of the future
