

A photograph of several cows in a field. In the foreground, a brown and white cow lies on a grassy bank. Behind it, a black and white cow sits on a large, mossy rock. To the left, a brown and white cow stands. In the background, there are two red wooden barns with grey roofs. The sky is clear and blue.

# Genetic evaluation for type traits is improved

Kjell Johansson and Jan-Åke Eriksson

Copenhagen

10<sup>th</sup> January 2013

# Aim

- **Bulls and cows evaluated in the same model**
- **Use multiple trait evaluations within lactation**
- **Investigate the effect of later lactations**

**NAV**

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

# The data

Total number of cows in thousands

Breed	Lactation	Holstein	RDC	Jersey
Denmark	1	996	177	180
	2	254	26	19
	3	160	32	21
Finland	1	97	204	
	2	35	68	
	3	21	50	
Sweden	1	222	215	2
	2	4	2	
	3	13	7

# Where do the results lead us?

- Selection on first lactation improves later lactations
- Records from later lactations are valuable:
- They will improve accuracy of evaluation

**NAV**

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

# Improvements in evaluation

3 lactations:

Multiple trait analysis within and between lactations in 3 trait groups

Body

Feet and legs

Udder

Data and model harmonized over countries

The same animal model used for both sires and dams

=>efficient use of data

# Summary

- Data harmonized
- The same effects in the model for all countries
- Breeding values for sires and cows from the same analysis
- Correlations between traits
- Data from 3 lactations: high correlations between them

**NAV**

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

# Summary

Reliabilities have increased: Selection will be more effective

There will be considerable changes in rank order of dams  
Less changes for sires

*Thank You!*
