

Efficient collection of DNA and pedigree verification/assignment

**– status and plans in Denmark,
Sweden and Finland**

NAV workshop

Copenhagen, January 2015

Anders Fogh, Minna Toivonen, Nils-Erik Larsson

NAV mælkeafgiftsfonden

STØTTET AF

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

Background for pedigree verification

– today and in the future

- **Microsatellites**
 - Can confirm or reject possible parents, but cannot find parents
 - **Expensive test**
- **SNP**
 - **Find parents with 99,9% reliability with sufficient number of SNP's (≈ 400)**
 - **Method used today** – pedigree verification of genotyped animals – handheld and time consuming

Status on common Nordic pedigree verification system

- Initial discussions in Sweden and Finland
- Discussions, technical description and programming started in Denmark in spring/summer 2014
 - Parentage database and algorithm programmed in Denmark
 - Ordering of tests and information to farmer described
- Nordic coordination will start in winter 2014/2015

NAV

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

Starting point

- **Approx. 400 SNP's, of which ≈ 100 are determined internationally by ISAG**
- **Previously genotyped animals from Denmark, Sweden and Finland**
- **Beef and dairy**

NAV

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

Collection of DNA material

Denmark

Today:

- **Blood, semen, tissue (TSU and ear tags), etc. today**

In the future:

- **Ear tags in whole herds**
- **TSU for single animals – "German procedure"**
- **Tissue is stored in cooperation between cattle organizations**

NAV

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

Collection of DNA material

Sweden

Today:

- Blood (TEGO kit), hair samples, nose-swab, semen
- Hair samples stored at Dynamic Code from 2000 – Possible to SNP-test if found valuable!?

In the future:

- Ear tags in whole herds
- Tissue stored on lab (Dynamic Code, Genoskan or other lab used). Tissue owned by Växa Sverige

NAV

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

Collection of DNA material

Finland

Today:

- Blood (TEGO kit, tubes), hair samples, nose-swab, (semen)
- Old hair samples stored by Faba. New samples from 2010 stored in Genoskan, owned by Faba

In the future:

- TEGO kit, ear tags in whole herds
- Tissue stored in lab (Genoskan or other lab used).
Tissue owned by Faba

NAV

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

Parentage verification

- **400 SNP's for all animals are loaded to parentage database**
- **Foreign animals via Interbull service**

NAV

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

How to verify parentage?

Test of one parent/search for possible parents:

- Opposite homozygotes = error
- Count number of errors

NAV

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

Verification of parentage

- Possible parent

A...**G**...C..A..C..**C**..A..A..T..C
C...**G**..A..T..G..**C**..A..C..A..C

}

Pairwise chromosomes

- Offspring

C...**A**..C..A..G..**A**..A..A..T..G
A...**A**..C..T..G..**A**..A..C..A..C

Access to parentage database

- **Ordering:** Possibility to connect to common parentage database from national clients
- **Pedigree correction:** Information from national databases back to parentage database when pedigree is corrected

NAV

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

Information to farmer

- Error in pedigree
- Correction of parentage
 - More and more automatically, when more cows are being genotyped

NAV

Overview of workflow in new system

Possible labeling of parentage

Denmark

Labeling of individual animal on database, printouts etc.:

Scenario	Sire		Dam		Remark on Danish database
	Test	Approved	Test	Approved	
1	Yes	Yes	Yes	Yes	Parentage approved
2	Yes	Yes	No	No	Sire approved
3	No	No	Yes	Yes	Dam approved
4	Yes	No	Yes	No	Parentage rejected
5	Yes	No			Sire rejected
6			Yes	No	Dam rejected

Generally pedigree is not deleted on national database, if it is not approved – but herdbook marking is deleted

NAV

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

Possible labeling of parentage

Sweden

Today

In database, printouts etc.: D = DNA-typed V= pedigree verified

In the future

Same but done with SNP. Maybe further developed according to Danish scheme

December 2014 decision taken that pedigree information found rejected by genomic test should be deleted in database!

Routines for updating from SNP-test, where correct ancestry found has to be established

NAV

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

Possible labeling of parentage

Finland

- Every animal has a label based on insemination date and birth information (ICAR rule)
 - "Sire correct/conflict/not possible to derive"
- Parentage is tested normally for both sire and dam (microsatellite) → label: "DNA-tested"
 - The same label even if dam is dead/not tested
- Incorrect pedigree:
 - Farmer is responsible to correct in national database

NAV Not accepted in herd book with incorrect pedigree

Sample with minimal effort and maximal reliability!

Sampling - part of
normal work flow

Unique connection
between tag and sample

NAV

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

Danish pilot study

- Started November 2013
- Test ear tag and collection procedure from stable to lab
- Goal 5.000 ear tags used
- Frozen samples are genomic tested by Genoskan – tissue quality
- Status
 - 2,500 ear tags used now – rest in 2015
 - 40 herds – all breeds

NAV

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

Procedure for collection

NAV

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

Lessons from Danish pilot study

- Farmers are very satisfied with ear tags and applicator
- Modification of ordinary applicator
- Allflex has more focus on production process

In the future – test of ear tags from more manufacturers
