Health traits evaluations

UDDER HEALTH

Clinical mastitis , Cell count (indicator trait)
Udder conformation (indicator traits)

CLAW HEALTH

Claw diseases (trimmers)

GENERAL HEALTH

Reproductive-, Metabolic disorders,
Feet and Leg problems -- Clinical mastitis,
metabolic biomarkers (BHB & Acetone indicator traits)

Metabolic Biomarkers - New indicator traits

Metabolic Biomarkers

Ketone bodies detectable in milk samples:

β -hydroxybutyrate (BHB) & Acetone

NAV

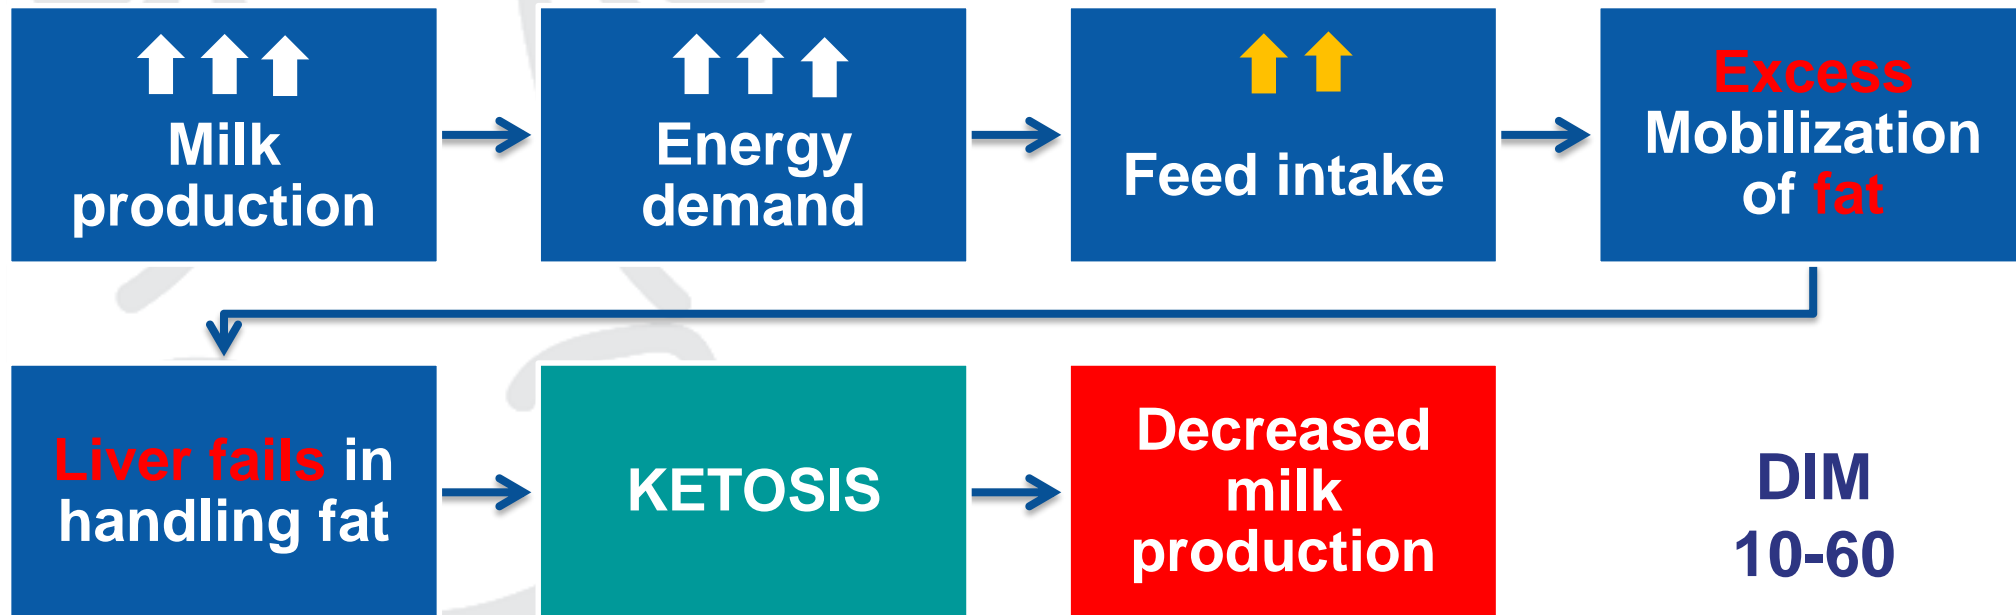

Nordisk Avlsvärdering • Nordic Cattle Genetic Evaluation

Metabolic Biomarkers

Ketone bodies detectable in milk samples:

β -hydroxybutyrate (BHB) & Acetone

Leading to ketosis:

Data – Disease traits

- Treatment records since the 80's
- Veterinarians, AI technicians and Farmers
- Breeds: Holstein, Jersey and Red Dairy Cattle (RDC)
- Lactations 1-3
- Defined as binary 0/1 trait

Healthy
non-treated

Sick
treated

NAV

Data - BHB and Acetone

- Since 2013 – Denmark
- From 2018 – Finland and Sweden
- Routine predictions from milk samples collected within the milk recording scheme – mmol/L
- Lactations 1-3

BhB

Acetone

Trait definitions

Ketosis		0.012	0.65	0.76
BHB			0.15	0.88
Acetone				0.06

Low to moderate heritabilities & high genetic correlations

Value of including BHB & acetone

Reliabilities for cows **with or without BHB and Acetone observations**, that have veterinary treatment observations but not own progeny

Breed	BHB & Acetone obs	Other Metabolic disorders	Ketosis	GH index
HOL	Yes	0.34 15%	0.36 19%	0.32 6%
	No	0.29	0.29	0.30

NAV

Summary

- New objective indicator traits for Ketosis in the General Health evaluation
 - Diagnosis for subclinical and clinical ketosis

NAV

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

Summary

- New objective indicator traits for Ketosis in the General Health evaluation
 - Diagnosis for subclinical and clinical ketosis
- Metabolic biomarkers showed favorable and high genetic correlations with Ketosis

NAV

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

Summary

- New objective indicator traits for Ketosis in the General Health evaluation
 - Diagnosis for subclinical and clinical ketosis
- Metabolic biomarkers showed favorable and high genetic correlations with Ketosis
- Higher heritability of BHB and acetone than for Ketosis

NAV

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

Summary

- New objective indicator traits for Ketosis in the General Health evaluation
 - Diagnosis for subclinical and clinical ketosis
- Metabolic biomarkers showed favorable and high genetic correlations with Ketosis
- Higher heritability of BHB and acetone than for Ketosis
- The inclusion of the metabolic biomarkers increases cow EBV reliability, especially for ketosis and metabolic disorders

NAV

Summary

- The new General Health evaluation was introduced November 2017 for all breeds (Holstein, RDC and Jersey)
