Use of ICT in Danish Extension Activities

Meeting Room 5

Session #709

To overcome high costs and strong environmental regulations, Danish farmers must produce using best methods and knowledge available. A unique two-layer advisory system including 31 local advisory centres and a common Knowledge Centre for Agriculture helps them fulfilling this. ICT has since 1997 played an ever-increasing crucial role in this system in dissemination of information and offering of online services. Primarily targeting advisors, the information database www.LandbrugsInfo.dk with +50.000 articles covering all aspects of farming functions as a library and a as an accelerator of new knowledge. All 3.500 employees in the advisory system use LandbrugsInfo and many of them visit LandbrugsInfo several times each day. For farmers, the portal www.landmand.dk offers personalized information and services including access to farm specific data and e-documents from to example dairies and feed stuff companies. Approx. 25.000 out of 35.000 Danish farmers are active users of Landmand.dk. All local advisory centres have their own web sites. Most of these sites and a number of other farming related sites including Farmers Weekly, is running on a common CMS developed by the Knowledge Centre. This ensures a cost-effective solution; re-use of information and single sign on for users.

How are land-grant Universities positioned to work globally?

- *Leaders in research*
- *Engaged universities*
- *Outstanding scholars*
- *263,000 alums around the globe*
- *The student population in U.S. higher education is becoming increasingly diverse both linguistically and culturally*
- *We have intellectual knowledge and capacity in faculty*
- *We have centers to work effectively in global environments*

Information Management Services - Ideal for Service Providers

FarmRite is a sophisticated data management and processing service that quickly and efficiently provides high-quality, standardized information products that you and your customers can use to make more profitable management decisions. [Learn More](#)

Farm Management Software - Ideal for Growers

SST Summit & SST Stratus is a complete package for desktop and mobile mapping, record-keeping, and reporting. Record farm activities, use logistics to organize field operations and create reports to assist in decision making. [Learn More](#) | [Download 30-Day Trial](#)

Desktop GIS Software

SSToolbox is the premier GIS for crop consultants, fertilizer/chemical dealers, educators, researchers, and farm managers. The power of SSToolbox lies within its innovative analysis functions, which allow you to gain real management information from your field-level data. [Learn More](#)

SSToolkit is an economical GIS designed for farmers who have access to the more comprehensive analytical services provided by their local input supplier or crop consultant. [Learn More](#)

Mobile Data Cons

00:05:42

Application Scenario for QR Code with Mobile Devices

- Data to be collected for traceability including the farming activities messages such as seeding, weeding, fertilizing, disease prevention, harvest and shipping, are designed to be stored in QR codes.
- By scamming the QR code with mobile device, the data stored in the QR code can be decoded and uploaded to the traceability database system.
