The climate challenge

Extreme rain doesn't care much for borders. Climate change is a challenge in cities and in the agricultural landscape. The work with water and climate adaptation is at the top of many countries' priority list, and the WaterCAP-Taskforce is created to meet these challenges. The Mobile Transnational Task Force (MTTF) will visit targeted case areas with either an excess or deficit of water – or simply poor water quality due to climate change – and point at solutions in close cooperation with you.

The WaterCAP-Taskforce offers you:

- International water experts with knowledge of and experience on selected topics related to water and climate adaptations
- Tools for the development of local solutions for local challenges
- A holistic solution by using bottom-up processes in order to find win-win solutions

Invite the taskforce to your area

The transnational taskforce will focus on selected regions with climate change challenges.

A visit from our international water experts will bring you new insight and answers to your local climate challenges.

In order to be taken into consideration, please present your climate challenge by using the WaterCAP-Taskforce 'case pool' form at www.watercap-taskforce.eu – or contact your national WaterCAP-Taskforce partner (see back page).

We look forward to cooperating with you!

The regions:

Transnational water expertise brought to you by:

CDR: Scenarios on CC impacts on groundwater. Adaptation plans, geographical flood identification & guidelines.

Province of Drenthe: Knowledge of agri water control technology, river restoration and large scale climate adaptation.

Rivers Trust: NGO experts in community-led river catchment management, planning & implementation of restoration actions.

Waterboard of Oldenburg: Climate adaptation in groundwater resource management.

Deltares: Expertise on CC impacts on water systems (floods and droughts), innovative solutions and implementation.

Knowledge Centre for Agriculture: Experts in agriculture - finding solutions for the benefit of agriculture and environment.

The WaterCAP-Taskforce

WaterCAP-Taskforce is a project partnership which clusters knowledge and experience on water and climate change adaptation from many countries and multiple sectors in the North Sea Region. The cluster consists of former InterReg projects dealing with water and climate change.

The WaterCAP-Taskforce partnership is a comprehensive knowledge base made available to stakeholders through the transnational taskforce.

If you'd like to cooperate with us in future water & climate change projects, we'll be happy to give you the opportunity to test your ideas in the project partnership.

International need for new water solutions
