

## Videncentret for Landbrug P/S har stået for udvikling og drift af den engelske web-version på dNmark-projektet

### Research Packages

The work in the alliance is divided into six different research areas also called research packages.

Illustration showing the research packages

Research package 1: **National Nitrogen Model**

Research package 2: **Landscapes**

Research package 3: **Economy and Incentives**

Research package 4: **Studies of Nitrogen**

Research package 5: **Participatory Planning**

Research package 6: **Solution Scenarios**

- Research package 4 provides basic knowledge for research package 1-3 and contributes to scenarios when/if new research elements from research package 4 are useful to include in these scenarios.
- Research package 1-3 – case studies model work packages. These packages form the basis for modeling scenarios.
- Research package 5 – a large part of the dialog with local stakeholders takes place in this package and so does the dialog with companies – research package 5 ensures that user ideas for sub-scenarios are heard. At the same time research package 5 is responsible for supporting communication from the other research packages.
- Research package 6 – all scenarios are gathered in this package, and it also ensures that the strategy is followed and developed, and that everyone is involved eg in joint meetings and workshops.
