

## Do you have a problem with too much, too bad or too little water?

# Invite the WaterCAP-Taskforce to your area

Extreme rain doesn't care much for borders. Climate change is a challenge in cities and in the agricultural landscape. The work with water and climate adaptation is at the top of many countries' priority list, and the WaterCAP-Taskforce is created to meet these challenges.

The Mobile Transnational Task Force (MTTF) will visit targeted case areas with either an excess or deficit of water – or simply poor water quality due to climate change – and point at solutions in close co-operation with you.

The transnational taskforce will focus on selected regions with climate change challenges. A visit from our international water experts will bring you new insight and answers to your local climate challenges. In order to be taken into consideration, please present your climate challenge by using the WaterCAP-Taskforce 'case pool' form below. We'll send you an email confirming the request and we'll get in touch soon hereafter for follow-up. Please be aware that the project doesn't have unlimited funding and therefore we can't promise all interested parties/stakeholders a visit – but you will hear from us.

Please fill in your data and short description of your climate change challenge, with specification of area and parties/stakeholders involved. Or submit online via the QR-code.

We look forward to cooperating with you!

Kind regards - the WaterCAP-Taskforce partners

	YES! I would like a visit from the MTTF
