

Notat: Ny Udbyttefremgang Vinterraps Forsøgsserie 05005 og 05006 år 2014, 2015 og 2016

03-01-2017

Marlene Trinderup, konsulent
matr@teknologisk.dk, +45 72 20 32 97

Formål

- Det undersøges om udbytte niveau (udbytte kg std. kvalitet) og variation i de målte udbytter er forskellige i storparcelforsøg og småparcelforsøg.

Overordnede konklusioner

- Der er ikke statistisk forskel på udbytteniveauet i små-parcelforsøg og stor-parcelforsøg (se Appendix – resultater for "Difference Niveau, Alle år, Udbytte (kgStdKvalitet)"). Den simple t-test for om den gennemsnitlige difference er nul indikerer dog, at der er en forskel idet p-værdien er 0,045 – dvs. hypotesen at den gennemsnitlige difference er nul forkastes. Men modellen for differencen, hvor år og lokalitet indgår som tilfældige effekter og hvor interceptet testes for om det er nul (ingen forskel mellem små- og stor-parcelforsøg) viser ingen forskel på de to forsøgstyper (p-værdi = 0,361)
- Der er statistisk forskel på variationen i udbytte i små-parcelforsøg og stor-parcelforsøg (se Appendix – resultater for "Difference CV, alle år, Udbytte (kgStdKvalitet)"). Den simple t-test for om den gennemsnitlige difference er nul giver en p-værdi < 0,001 – dvs. hypotesen at den gennemsnitlige difference er nul forkastes. Modellen for differencen, hvor år og lokalitet indgår som tilfældige effekter og hvor interceptet testes for om det er nul (ingen forskel mellem små- og stor-parcelforsøg) viser ligeledes forskel på de to forsøgstyper (p-værdi = 0,0035)

Metoder

- Data trækkes fra NFTS. De outlier markeringer der er lavet i NFTS benyttes til at udelukke enkelt-observationer.
- For Udbytte kg std. kvalitet analyseres pr år og for alle år samlet henholdsvis differencen mellem udbyttet i små- og storparcelforsøg, samt differencen i variationen (udtrykt som CV) mellem små- og storparcelforsøg.
- Differencen beregnes som:
 - o Difference udbytte = udbytte Småparcel – udbytte Storparcel
 - o Difference variation = variation Småparcel – variation Storparcel
- Derudover analyseres også niveauet i kg std. Kvalitet for effekt af parcelstørrelse pr lokalitet pr år, samt på tværs af lokalitet pr år. Niveauet Udbytte kg std. kvalitet analyseres ikke på tværs af år da behandling (faktor 1) har ændret niveau fra 2014 til 2015 og '16.
- Data er dels analyseret med en t-test (tester om differencerne er lig med nul) og i følgende lineære mixed effects modeller:
 - o Differencer analyseret pr år:

$$Y_i = \beta_0 + \beta_1 LF1 + lbnr_j + e_i$$

- Differencer analyseret på tværs af år:

$$Y_i = \beta_0 + \beta_1 LF1 + aar/lbnr_{k[j]} + e_i$$

- Niveau analyseret pr lokalitet pr år:

$$Y_i = \beta_0 + \beta_1 PARCELSTØRRELSE + \beta_2 LF1 + gentagelse_j + e_i$$

- Niveau analyseret pr år:

$$Y_i = \beta_0 + \beta_1 PARCELSTØRRELSE + \beta_2 LF1 + lbnr/gentagelse_{k[j]} + e_i$$

Tabel 1. Oversigt over hvilke led-numre der indgår i analyserne. Omdøbning af led-numre for småparcelforsøgene, således at disse passer med led-numrene for storparcelforsøgene.

Lednumre, 2014			Lednumre, 2015 og 2016		
Småparcel 05005		Storparcel 05006	Småparcel 05005		Storparcel 05006
Oprindelig	Nyt led-nr.		Oprindelig	Nyt led-nr.	
NFTS led-nr.			NFTS led-nr.		
2	1	1	1	1	1
7	2	2	4	2	2
9	3	3	7	3	3

Tabel 2. Oversigt over forsøgsserierne og hvilke forsøg der indgår i analyserne. Omdøbning af LBNR (markeret med fed) for storparcelforsøgene, således at lokalitet passer med småparcelforsøgene.

Småparcel 010801616		Storparcel 010811616	
LBNR		Oprindelig NFTS LBNR	Nyt LBNR
001		001	001
002		002	002
004		004	004
005		005	005
006		006	006

Småparcel 010801515		Storparcel 010811515	
LBNR		Oprindelig NFTS LBNR	Nyt LBNR
001		001	001
002		002	002
004		004	004
006		005	006

Småparcel 010801414		Storparcel 010811414	
LBNR		Oprindelig NFTS LBNR	Nyt LBNR
001		001	001
003		003	003
004		004	004
005		005	005
006		006	006

*) Der er ingen data for forsøgene for LBNR 005 – denne udelades derfor

Resultater

- Alle resultater præsenteres i Appendix.
