Larsen, S.E., Ovesen, N.B., Windolf, J. & Kjeldgaard, A. 2019. Vandløb 2017. NOVANA.
Aarhus Universitet, DCE – Nationalt Center for Miljø og Energi, 74 s. - Videnskabelig
rapport nr. 306

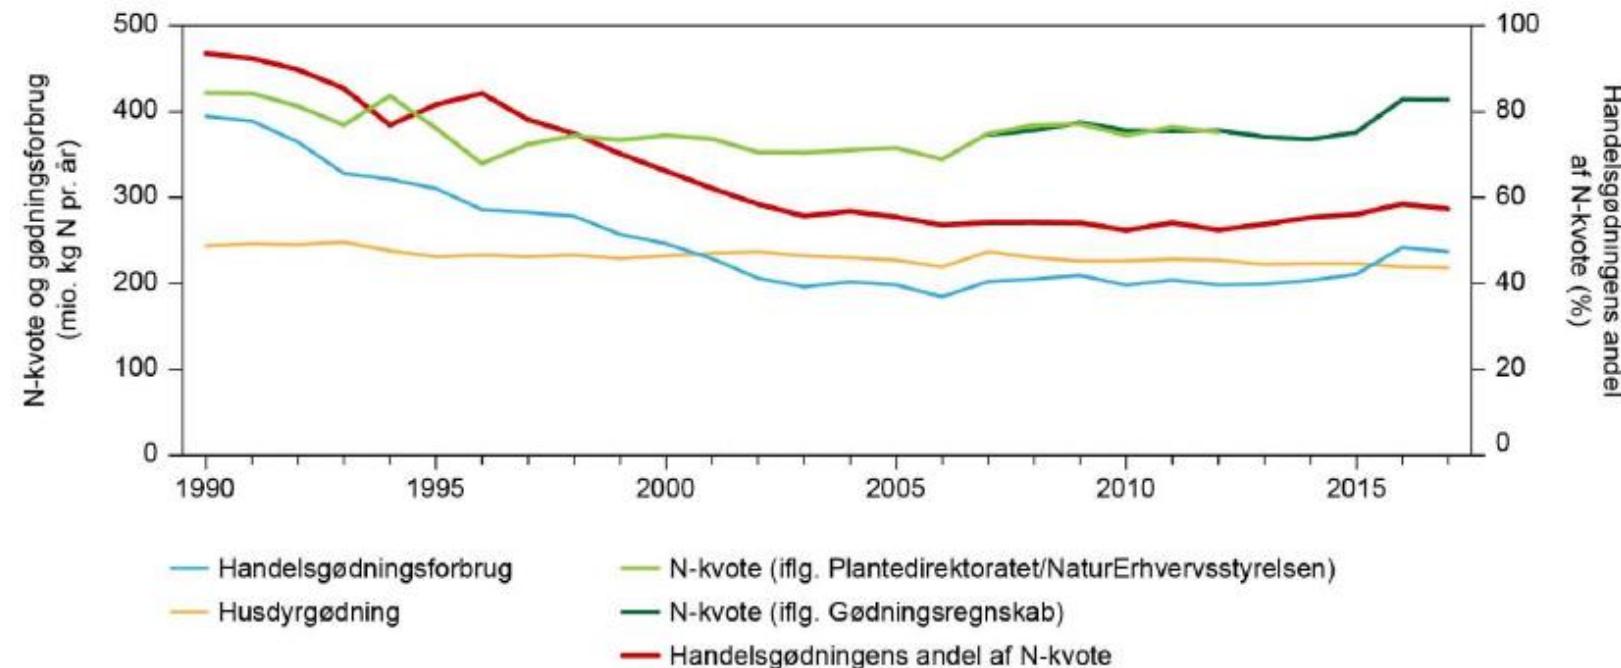

Consequences with reduced N use

Protein content in wheat and barley

Government decision 2015

- Economic optimized N use

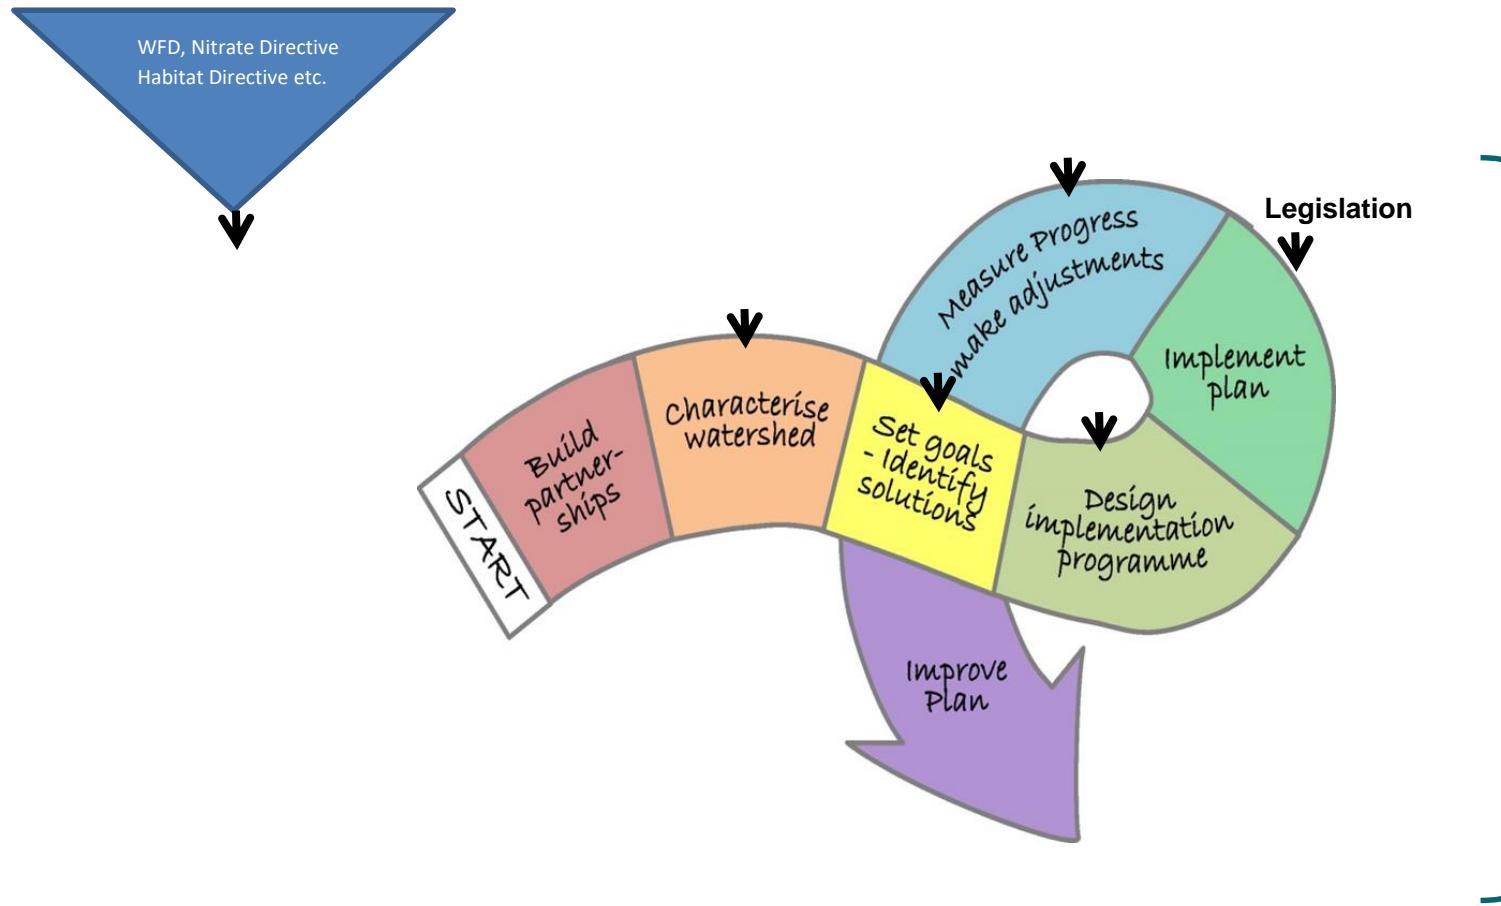

Figur 3.3. Udviklingen i landbrugets kvælstofkvote, forbrug af N i husdyrgødning og N i handelsgødning for hele landet i perioden 1990 til 2017. Desuden handelsgødningens andel af N-behovet i pct.

Government decision 2015

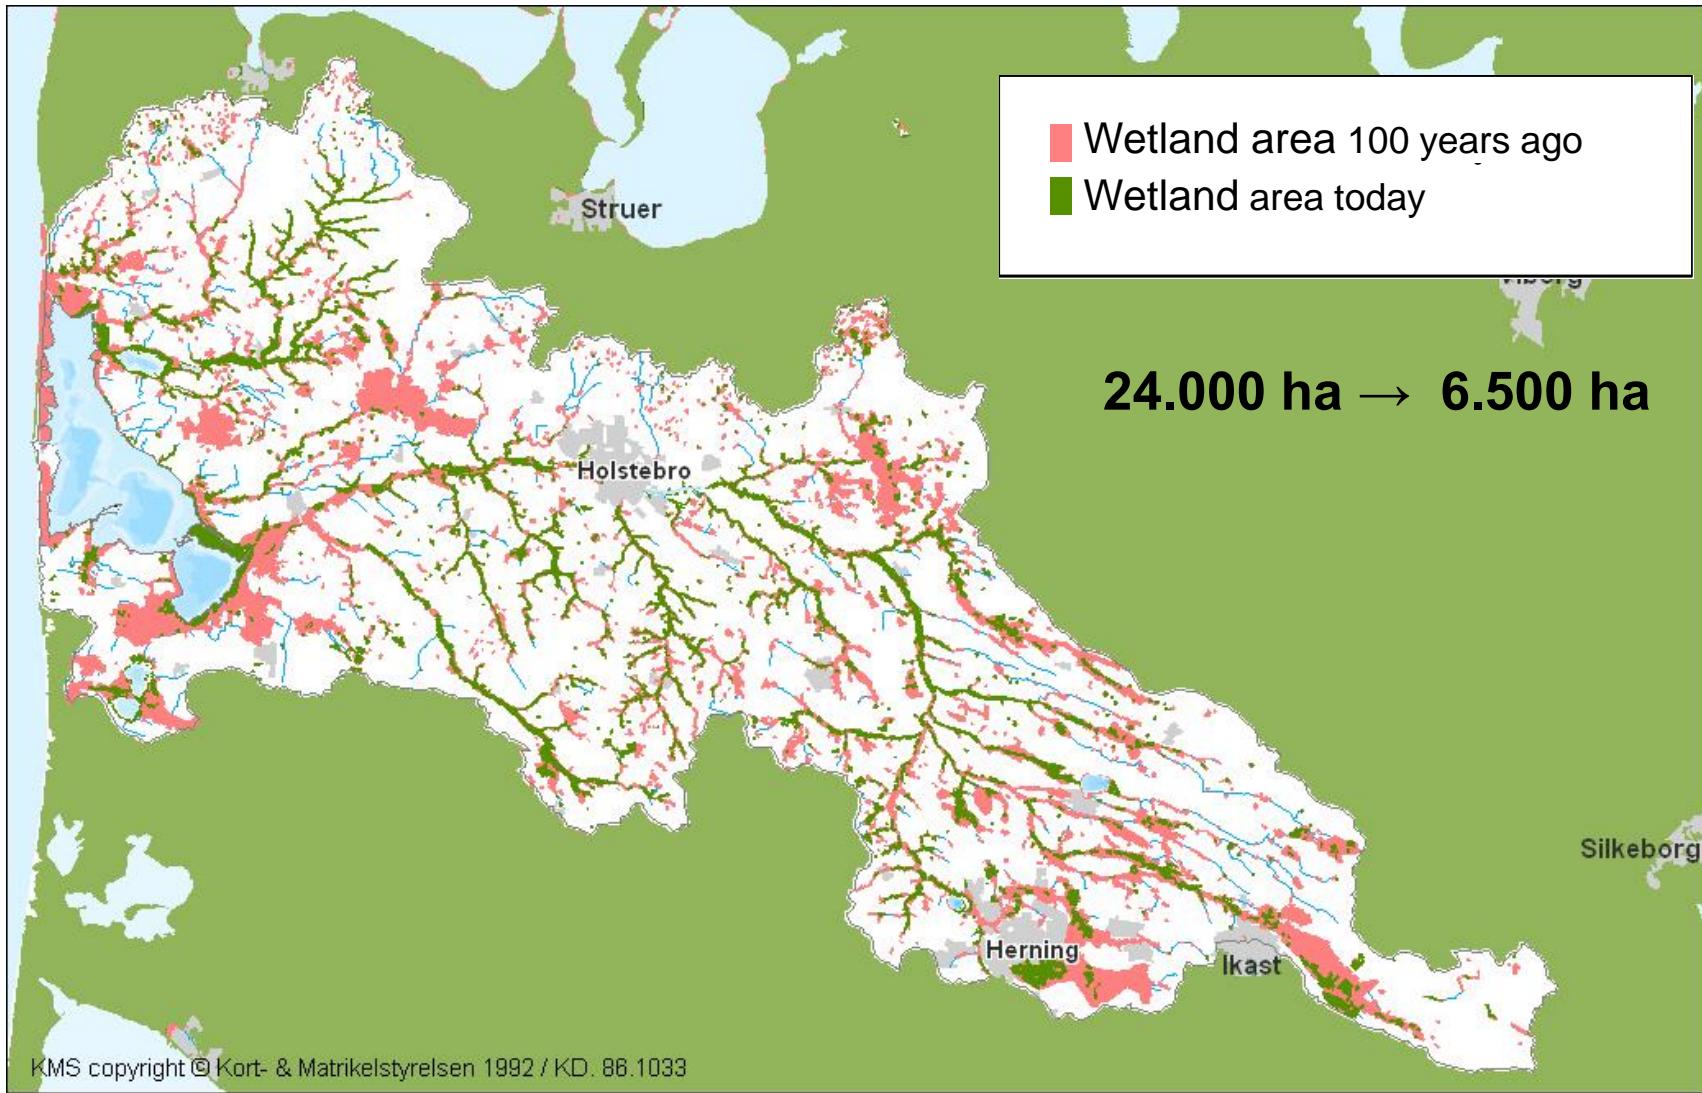

- Economic optimized N use
- Extra catch crops
- Continue restoring larger wetlands (270 mill €)
- Implement 900 ha of constructed wetlands (52 mill €)
- Targeted regulation – even more catch crops

30 years of Top down regulation - consequences

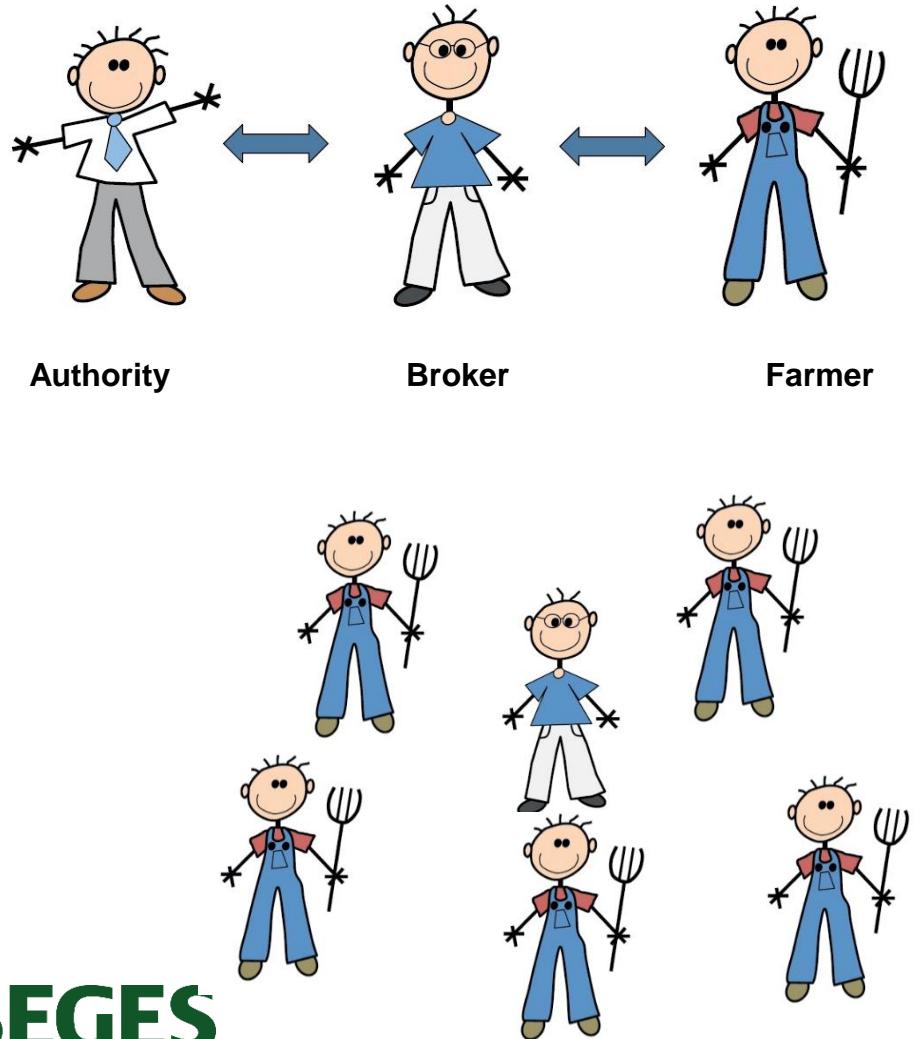

- Lack of trust
- No ownership to solve problems
- Confrontation

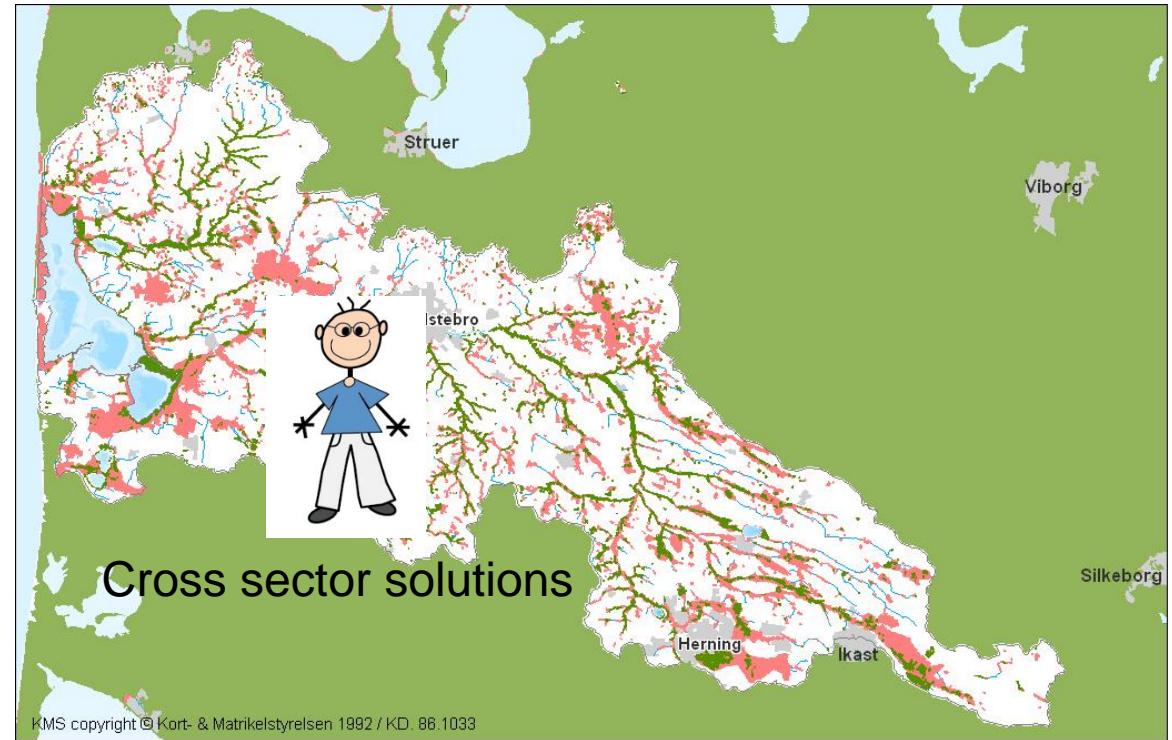

Potential for reducing nutrients to surface waters

Catchment officer

SEGES

Tested in Water CoGovernenace in 2016

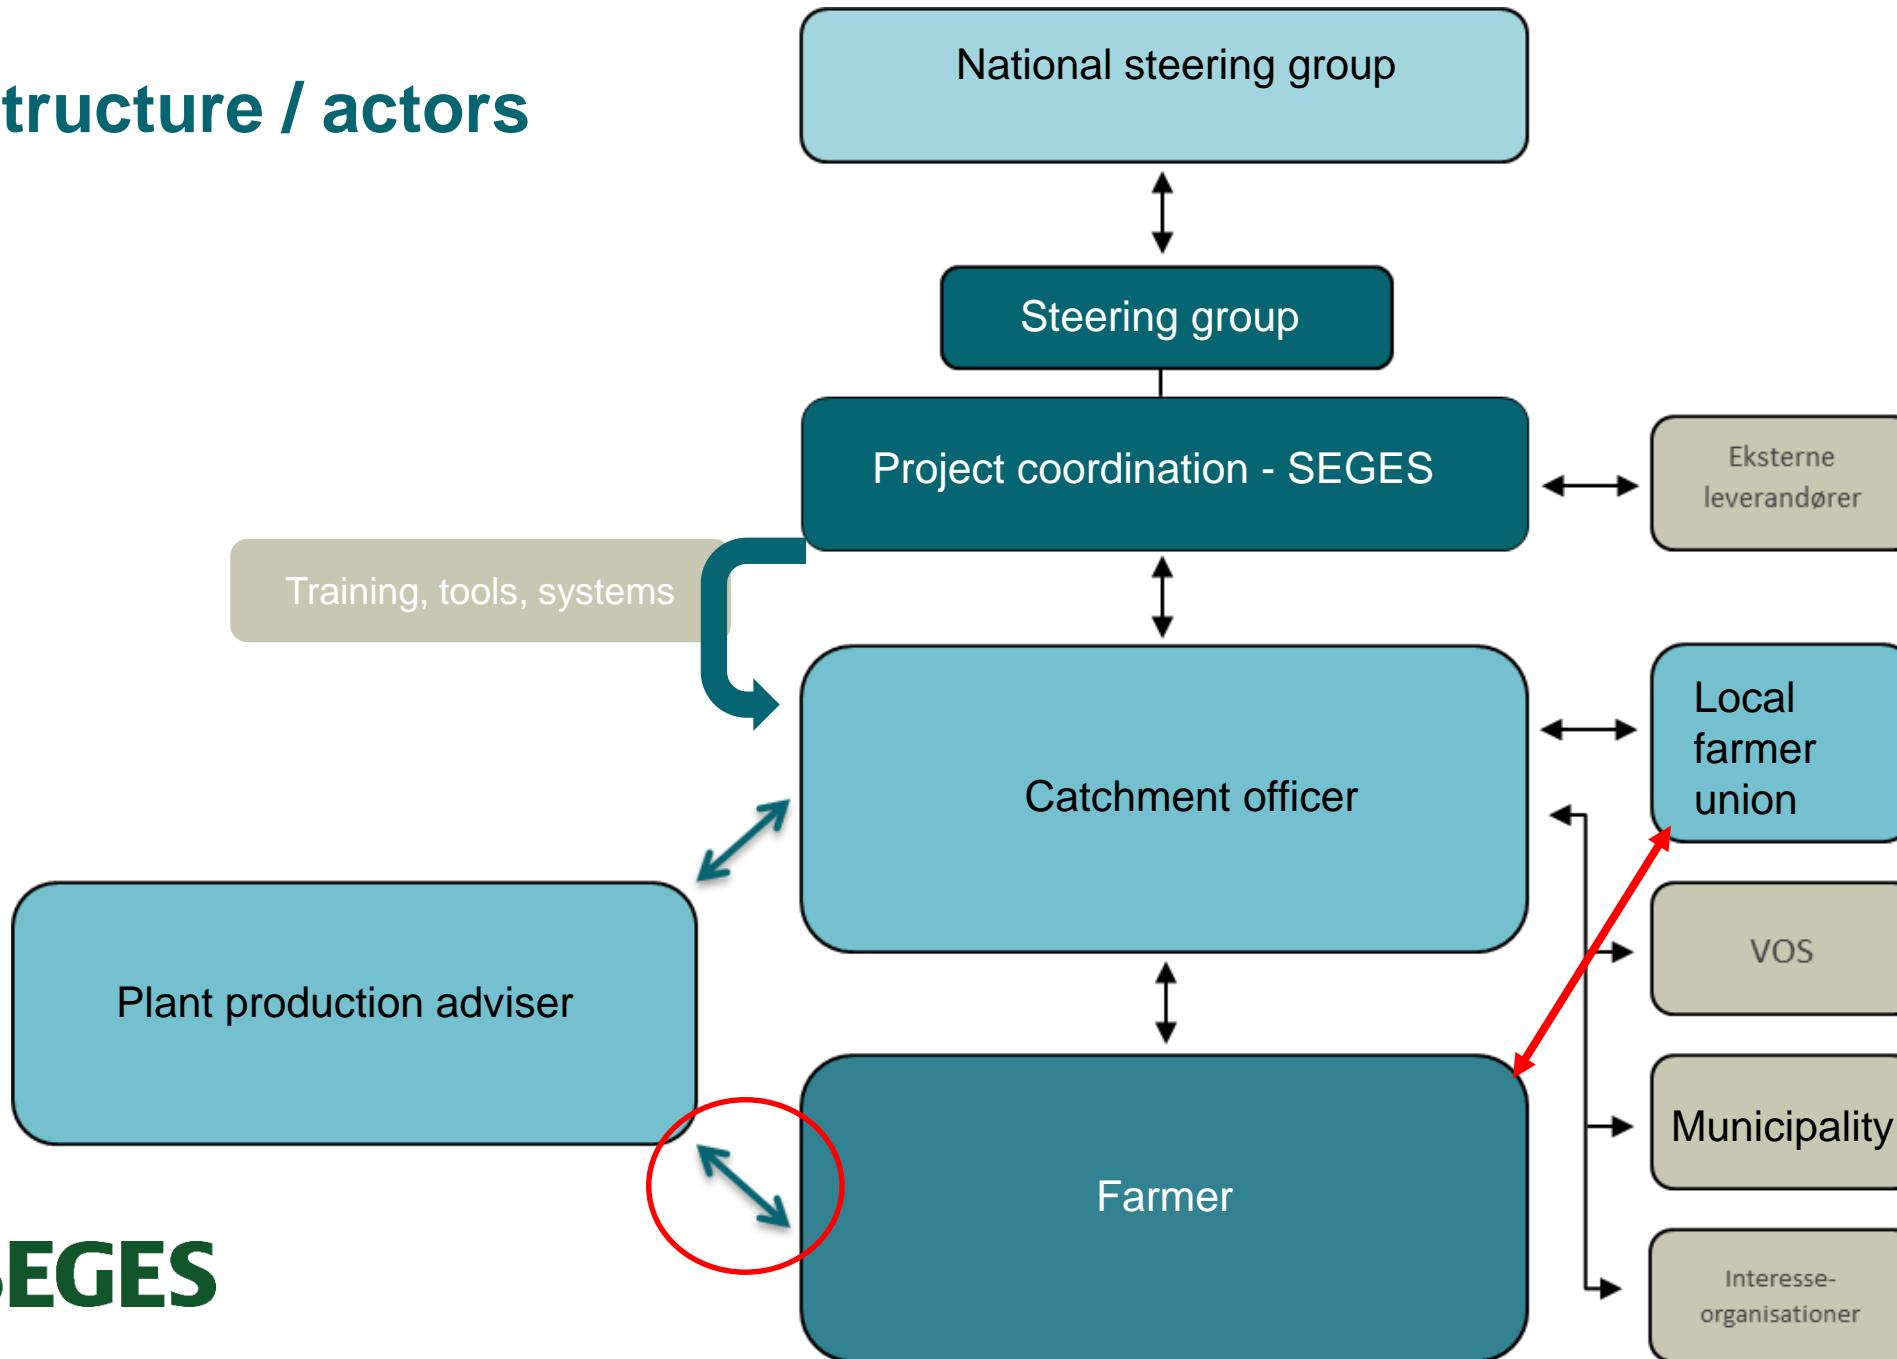

Catchment officer – new concept in Danish water management

- National Program in 2017
- 25 Catchment officers
- Budget: 8 million eur over 4 years
- 50 % payed by farmers (farmer union) and 50 % payed by the government
- No direct payment for the farmer
- Applications for constructed wetlands:
 - 2018: 78 2019: 338 2020: 300

Structure / actors

SEGES

What do we need

- More cross-sector thinking/solutions/measures (Nutrients, water, climate, nature)
- Optimize local cooperation with local authorities and other stakeholders – more local based planning
- Better bottom-up / top-down interaction in the Danish governance

A wide-angle photograph of a rural landscape. In the foreground, there's a dirt path leading towards a body of water covered in green algae. Beyond the water, there are several fields of different colors (green, yellow, brown) and some farm buildings. A dense line of trees separates the fields from rolling hills in the background. The sky is blue with scattered white clouds.

Thank you for your attention
