

AP 6: Video – En mættet randzone kan reducere næringsstofudledning

Udarbejdet af Christian Rathcke Tegllund, Kommunikationskonsulent, Marketing & Fagkommunikation, 2021

The screenshot shows the SEGES website interface. At the top, there is a navigation bar with the SEGES logo and links for KVÆG, PLANTER, SVIN, ØKOLOGI, and VIRKSOMHEDSLEDELSE. A search bar labeled 'SØG VIDEO' is also present. The main content area features a video player with a thumbnail of a man in a yellow safety vest and orange beanie standing in a field. The video title is 'En mættet randzone kan reducere næringsstofudledning' (A saturated riparian zone can reduce nutrient discharge). Below the title, it says '26. februar 2021' and lists keywords: 'fosfor, kvælstof, mættet randzone, miljø, næringsstoffer, næringsstofudledning, nitrat'. To the right of the main video, there is a 'Related videos' section with three smaller video thumbnails. Below the main video, there is a 'Del' (Share) button and social media icons for Facebook, Twitter, and LinkedIn. A URL bar at the bottom shows the video's link: <https://www.seges.tv/video/67371061/en-maettet-randzone-reducerer>.
