

# New catalogue released for targeted agro-environmental nutrient mitigation

26 October 2021 - Published by Alistair Maltby

**This catalogue provides you with a range of targeted environmental measures and focuses on the location, design and effect of measures at the border of cultivation land.**

These are measures that can help reduce loss of nutrients from fields and thus improve the condition of our aquatic environment.

The catalogue has been translated from Danish to English specifically for the WaterCoG project.
